

GS Projects 2014 Seminar Feedback Form

Group: BSM

Assessed by: PT/NW

Date: 14/03/2013

Feedback to all groups: Generally the presentations were of a good quality and almost all stuck to exactly 12 minutes each. The transparencies were professionally arranged with a well judged amount of text, and use of diagrams and figures. All speakers tended to have an over reliance on notes which hampered the flow in places. The diagram, which followed the main talks, showing the schematic view of the detector design was very useful and much appreciated.

Presentation

A very good presentation of the physics behind BSM models was given. Although the slides were quite busy in places the talk was still easy to follow.

Mark (out of 10): 7.25

Content

The presentation showed the a number of results from the large volume of research undertaken by the group. It was good to see a number of plots/results calculated by the group themselves.

Mark (out of 10): 7.25

Understanding

The presentation and response to questions demonstrated a good understanding of the subject.

Mark (out of 10): 7

Total mark (out of 30): 21.5

N.B. Marks are provisional
