

GS Projects 2014 Seminar Feedback Form

Group: Calorimeter
Assessed by: PT/NW

Date: 14/03/2013

Feedback to all groups: Generally the presentations were of a good quality and almost all stuck to exactly 12 minutes each. The transparencies were professionally arranged with a well judged amount of text, and use of diagrams and figures. All speakers tended to have an over reliance on notes which hampered the flow in places. The diagram, which followed the main talks, showing the schematic view of the detector design was very useful and much appreciated

Presentation

A high standard of presentation and clear description of the research carried out by the group.

Mark (out of 10): 8

Content

The seminar presentation showed the large amount of work from the group including the motivation for the chosen technologies and materials, and calculations carried out by the group. It was good to see the diagram on the layout of the trigger.

Mark (out of 10): 8

Understanding

The presentation and response to questions demonstrated a high level of understanding. The group was encouraged to finalise the dimensions of the detector and, if possible, to estimate the data volume of the experiment.

Mark (out of 10): 8

Total mark (out of 30): 24
