

GS Projects 2014 Seminar Feedback Form

Group: Tracking

Assessed by: PT/NW

Date: 14/03/2013

Feedback to all groups: Generally the presentations were of a good quality and almost all stuck to exactly 12 minutes each. The transparencies were professionally arranged with a well judged amount of text, and use of diagrams and figures. All speakers tended to have an over reliance on notes which hampered the flow in places. The diagram, which followed the main talks, showing the schematic view of the detector design was very useful and much appreciated.

Presentation

A very well presented and clear description of the research carried out by the group.

Mark (out of 10): 7.5

Content

The seminar presentation showed the large amount of work from the group including the motivation for the chosen technologies and materials. It was pleasing to see results from simulations, calculations and dimensions of the tracker as well as references to wider research.

Mark (out of 10): 8

Understanding

The presentation and response to questions demonstrated a firm level of understanding.

The group was encouraged to investigate signal size and the details of the endcap tracking.

Mark (out of 10): 7

Total mark (out of 30): 22 .5

N.B. Marks are provisional
